MSRI Call for Applications

SUMMER RESEARCH FOR WOMEN IN MATHEMATICS (SWiM) PROGRAM

The Mathematical Sciences Research Institute in Berkeley, California invites applications for its 2020 Summer Research for Women in Mathematics (SWiM) program. The purpose of this program is to provide space and funds to groups of women mathematicians to work on a research project at MSRI. Research projects can arise from work initiated at a Women's Conference, or can be freestanding activities. The ultimate goal of this program is to support mathematical research by assisting women's efforts to maintain involvement in a research community and to have a positive impact on these researcher's careers.

PROGRAM ELIGIBILITY

- Groups of two to six women with partial results on an established project may submit an application.
- Each member of the group must have a Ph.D. in mathematics or advanced graduate standing, and at least one team member must be U.S.-based.
- Applications require a Project Description and bio-sketch for each group member.
- **The visits must take place between June 15, 2020 and August 7, 2020.** Each group may apply to be in residence for a minimum of two weeks, though longer visits are preferred. All members of the group must be in residence for the duration of the visit.

FUNDING AND SUPPORT

- Lodging on UC Berkeley campus, meals and reimbursement of travel expenses will be provided.
- For group members with children, MSRI will provide funding that makes it possible for the member to fully take part in the program. This may be in the form of lodging and reimbursement of travel expenses for children who accompany the member to Berkeley, plus lodging and travel expenses for a caregiver, or reimbursement of additional expenses incurred if the children stay home, thus allowing the member to attend the program.
- Shared office space will be offered to partners or spouses of invited participants.

Applications are due by November 1, 2019.

Decisions will be announced by December 15, 2019. For additional details, visit:

Support for this program is provided by the National Security Agency, Microsoft Research, the Patrick J. McGovern Foundation, and IF/THEN, an initiative of Lyda Hill Philanthropies. MSRI has been supported from its origins by the National Science Foundation, now joined by over 100 Academic Sponsor departments, by a range of private foundations, and by generous and farsighted individuals.
