The Mathematical Education of Teachers II
Elementary and Middle Grades

Sybilla Beckmann

University of Georgia

MSRI March 2014
“A major advance in teacher education is the realization that teachers should study the mathematics they teach in depth, and from the perspective of a teacher.”
“Thus, this report recommends that before beginning to teach, an elementary teacher should study in depth, and from a teacher’s perspective, the vast majority of K–5 mathematics, its connections to prekindergarten mathematics, and its connections to grades 6–8 mathematics.”
Essential Grades K–5 ideas

CCSS domains at K–5:

- Counting and Cardinality
- Operations and Algebraic Thinking
- Number and Operations in Base Ten
- Number and Operations – Fractions
- Measurement and Data
- Geometry
# Operations and Algebraic Thinking

CCSS Table 1: Common types of $+ −$ word problems

<table>

<tr>
<td>(“How many more?” version): Lucy has two apples. Julie has five apples. How many more apples does Julie have than Lucy?</td>
<td>(Version with “more”): Julie has three more apples than Lucy. Lucy has two apples. How many apples does Julie have?</td>
<td>(Version with “more”): Julie has three more apples than Lucy. Julie has five apples. How many apples does Lucy have?</td>
</tr>
<tr>
<td>(“How many fewer?” version): Lucy has two apples. Julie has five apples.</td>
<td>(Version with “fewer”): Lucy has 3 fewer apples than</td>
<td>(Version with “fewer”): Lucy has 3 fewer apples than</td>
</tr>
<tr>
<td>Compare</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Shauntay has 12 cards. Jessica has 3 more cards than Shauntay. How many cards does Jessica have? ("More" version)

Shauntay has 12 cards. That is 3 fewer than Jessica has. How many cards does Jessica have? ("Fewer" version)

Note: students who rely only on keywords may mistakenly subtract 3 from 12 in the "fewer" version.
Take apart, both addends unknown

There are 7 marbles in 2 boxes. How many marbles can be in each box?

\[
\begin{align*}
7 & = 2 + 5 \\
7 & = 3 + 4
\end{align*}
\]
Using strategies based on properties of operations

CCSS Critical area 1, Grade 1:
Students “use properties of addition to add whole numbers and to create and use increasingly sophisticated strategies based on these properties (e.g., “making tens”) to solve addition and subtraction problems within 20.”
A “making a ten” method

\[8 + 6\]
A “making a ten” method

$8 + 6$

$\begin{array}{c}
\text{2} \\
\text{4}
\end{array}$

\[
\begin{array}{c|c|c|c|c|c}
\hline
& & & & & \\
& & & & & \\
\hline
& & & & & \\
& & & & & \\
\hline
\end{array}
\begin{array}{c|c|c|c|c|c}
\hline
& & & & & \\
& & & & & \\
\hline
& & & & & \\
& & & & & \\
\hline
\end{array}
\]
A “making a ten” method

\[8 + 6 = 8 + (2 + 4)\]

2 4
A “making a ten” method

\[8 + 6 = 8 + (2 + 4) = (8 + 2) + 4 = 14\]
Some subtraction methods within 20

Subtractions such as 14 – 9 and 12 – 3:

- View subtraction as unknown addend addition and count on to find the unknown addend
- View subtraction as unknown addend addition and make-a-ten with the unknown addend
- Subtract from ten
- Subtract down to ten first
Recommendation 1  Prospective teachers need mathematics courses that develop a solid understanding of the mathematics they will teach.

Recommendation 2  Coursework that allows time to engage in reasoning, explaining, and making sense of the math that prospective teachers will teach is needed to produce well-started beginning teachers. . . .

Elementary teachers — at least 12 hours on fundamental ideas of elementary mathematics.
“The mathematics of elementary school is full of deep and interesting ideas, which can be studied repeatedly, with increasing depth and attention to detail and nuance. Therefore, although prospective teachers will undertake an initial study of elementary mathematics from a teacher’s perspective in their preparation program, practicing teachers will benefit from delving more deeply into the very same topics.”
Middle Grades Teachers
Essential Grades 6 – 8 ideas

CCSS domains at Grades 6 – 8:

- Ratio and Proportional Relationships
- The Number System
- Expressions and Equations
- Functions
- Geometry
- Statistics and Probability
CCSS 6.RP.3
Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations.
Blue and yellow paint are mixed in a ratio of 2 to 3 to make green paint. How many pails of blue paint and how many pails of yellow paint will you need to make 30 pails of green paint?
Blue and yellow paint are mixed in a ratio of 2 to 3 to make green paint. How many pails of blue paint and how many pails of yellow paint will you need to make 30 pails of green paint?
Blue and yellow paint are mixed in a ratio of 2 to 3 to make green paint. How many pails of blue paint and how many pails of yellow paint will you need to make 30 pails of green paint?
Blue and yellow paint are mixed in a ratio of 2 to 3 to make green paint. How many pails of blue paint and how many pails of yellow paint will you need to make 30 pails of green paint?

5 equal parts make 30 pails

30 pails

green
Blue and yellow paint are mixed in a ratio of 2 to 3 to make green paint. How many pails of blue paint and how many pails of yellow paint will you need to make 30 pails of green paint?

5 equal parts make 30 pails
Reasoning with strip diagrams

Blue and yellow paint are mixed in a ratio of 2 to 3 to make green paint. How many pails of blue paint and how many pails of yellow paint will you need to make 30 pails of green paint?

12 → 6 6
18 → 6 6 6

5 equal parts make 30 pails
**Reasoning with strip diagrams**

**Ratio:** 2 parts blue to 3 parts yellow

**Values of the ratio:** $\frac{2}{3}$ and $\frac{3}{2}$

\[
B \text{ cups blue: } \frac{2}{3} \cdot Y \\
Y \text{ cups yellow: } \frac{2}{3} \\
B = \left(\frac{2}{3}\right) \cdot Y
\]
**Ratio:** 2 parts blue to 3 parts yellow

**Values of the ratio:** $2/3$ and $3/2$

\[
B \text{ cups blue: } \begin{array}{c}
\text{\hspace{1cm}3/2}\end{array}
\]

\[
Y \text{ cups yellow: } \begin{array}{c}
\text{\hspace{1cm}3/2}\end{array}
\]

\[
Y = \left(\frac{3}{2}\right) \cdot B
\]
“Because the middle grades are “in the middle,” it is critical that middle grades teachers be aware of the mathematics that students will study before and after the middle grades.”

CCSS 3.NF.1: “Understand a fraction 1/b as the quantity formed by 1 part when a whole is partitioned into b equal parts; understand a fraction a/b as the quantity formed by a parts of size 1/b.”

Middle grades teachers need at least 24 hours of mathematics that includes 15 hours on fundamental ideas of school mathematics appropriate for ML teachers.
Middle Grades Teachers

Recommendation 2 ii:
“Prospective middle grades (5–8) teachers of mathematics should be required to complete at least 24 semester-hours of mathematics that includes at least 15 semester-hours on fundamental ideas of school mathematics appropriate for middle grades teachers.”
Middle Grades Teachers

At least 15 of the semester-hours should consist of mathematics courses designed specifically for future middle grades teachers that address the essential mathematical ideas of the middle and elementary grades.

The remaining 9 hours should be carefully selected to strengthen prospective teachers’ knowledge of mathematics and the connections between one grade band and the next.
Middle Grades Teachers

“In no case should a course at or below the level of precalculus be considered part of these 24 semester-hours.”

Clarification:

- NOT college algebra, trigonometry, mathematical modeling, and other such courses that precede pre-calculus;
- The 15 hours SHOULD be courses specifically designed for teachers to study elementary and middle grades mathematics in depth;
- The 15 hours should NOT include a course such as linear algebra with a few days or a few weeks or a few moments per class period attending to issues of middle school mathematics education;
- The remaining 9 hours might include a statistics course beyond the introductory level, a calculus course, a discrete mathematics course, or additional courses designed for teachers, such as a calculus for teachers course.
Recommendations on roles for mathematicians in teacher education

- Teacher education is important
- Collaboration with mathematics education faculty
- More mathematics faculty need to become deeply involved in PreK – 12 mathematics education
- We should recognize the need to improve mathematics teaching at all levels
- Mathematics education will be strengthened by the growth of a mathematics education community that includes mathematicians
Thank you!

The Mathematics Teaching Community:
